

GlycoVaxyn is a Zurich-based biotechnology company active in the vaccine area. Backed by major venture capital funds, GlycoVaxyn is developing a new generation of antibacterial vaccines against major diseases.

To support our research team, we are offering a

Diploma/Master Thesis

for a M.Sc./B.Sc. student (minimum 6 months)

Your profile

- M.Sc. or B.Sc. student in Biochemistry, Molecular Biology, Chemistry or similar from a recognized institution of learning
- Experience in standard laboratory techniques (PCR, SDS-PAGE, AGE)
- English is advantageous

Your duties

- Perform scientific research under guidance of an experienced supervisor
- Perform research in one of our projects by using molecular biology and biochemistry techniques like DNA cloning, recombinant protein expression, protein purification and identification, carbohydrate analysis, etc.
- Participate in lab meetings and present your data
- Develop your scientific skills and learn how to work independently

The aim of your thesis is to make discoveries that support the development of high quality carbohydrate vaccines produced in recombinant bacterial cells. At the same time, you develop your scientific skills, knowledge and gain industry experience.

Working place is Schlieren near Zürich, easily accessible by public transportation. If you are highly motivated to perform your master thesis in a dynamic industry environment we are interested in hearing from you!

Please submit a short curriculum vitae, a list of your experiences in laboratory techniques and study topics, and a motivation letter to the following address:
